Problem Statement

Avenger Hardware is a global hardware manufacturing company selling products like personal desktops, laptops, processors, and accessories across multiple regions. Despite strong revenue numbers, the company is facing several business challenges:

- Revenue is growing, but profitability is declining.
- Net profit margin is negative despite healthy gross margins.
- Forecast accuracy varies across customers and products.
- Post-invoice deductions and operational expenses are significantly impacting margins.
- Market share fluctuates across regions and categories.
- Leadership lacks a unified view of Finance, Sales, Marketing, and Supply Chain performance in one place.

In short, the company is generating sales — but not converting them efficiently into sustainable profit.

The dashboard was designed to bring clarity across all functions and enable data-driven strategic decisions.

Objectives

The dashboard was built to address five key business objectives:

- Provide a single executive summary view for leadership to quickly assess company health and risks.
- One stop solution for Business to monitor major business KPIs across regions, products, and customers and across business functions such has finance, sales, marketing and supply chain.
- Analyse discounts and expenses across customers and products affecting gross margins and net profit.
- Track customer performance, regional contribution, and market share trends to identify growth opportunities.
- Analyse the variance between the actuals and forecast to mitigate the supply chain issues.

Solution Approach

To solve these problems, I built a 360° cross-functional dashboard structured across five Business Functions.

Executive Summary Page

Provides leadership with:

- Revenue, Margin, Profitability snapshot
- Regional contribution
- Market share trends
- Forecast accuracy overview

This enables quick strategic reviews without diving into details.

Finance Page

Provides Finance Team with:

- Full P&L visibility
- Breakdown of deductions
- Cost structure analysis
- Gross Margin vs Net Profit comparison
- Finance teams can identify leakage points and cost drivers.

This enables Finance Team to track the KPIs and get into the P&L details over time across customers, products etc.

Sales Page

Provides Sales Team with:

- Customer-level profitability
- Performance matrix (Net Sales vs GM%)
- Pre-Invoice Discount Details
- Unit economics breakdown

Sales leaders can Identify high-revenue but low-margin customers, shift focus toward profitable growth, revisit discounting strategies

Marketing Page

Provides Marketing Team with:

- Product-level profitability
- Performance matrix (Net Sales vs GM%)
- Operational Expense Details

- Unit economics breakdown

Marketing teams can optimize promotion spend, balance growth vs profitability.

Supply Chain Page

Provides Supply Chain Team with:

- Forecast vs Actual tracking
- Forecast accuracy trends
- Net error monitoring
- Customer-product level forecasting performance

This allows better production planning, reduced overstocking/understocking, with forecast integration with actuals business shifts from reactive reporting to proactive decision-making.

Business Impact

This dashboard would create measurable impact:

Improved Profitability

By identifying high-cost drivers and margin leakages, the company can improve Net Profit % from negative territory toward sustainable profitability. Focus on high-margin customers and categories instead of just high-volume sales.

Cost Control

Reduction in unnecessary operational expenses and excessive discounting.

Better Forecasting

With integration of Forecast and Actual Data, company can improve the Forecast Accuracy there by maintaining the inventory levels at optimum.

Strategic Regional Expansion

Based on the composition of revenue, gross margins and net profit across regions, markets company can reduce over-dependence on a particular market or product. At the same tile it can open the door to the next growth opportunity
